

Back-end Peer Review

peer review for assessment 1

Student_1	Jordy Fronik
Student_2	Ralf Zonneveld
Date	17 maart 2020
Teacher	Danny de Vries

Checklist

Source code is available on GitHub	v
Project is documented and has a readme.md	v
Cites the sources used; code comments or docs	v

Project install

Git clone the repository of your fellow student and install it follow the installation guidelines from the readme. Can you get it up and running?

Yes, the project works without technical problems!	v
Kinda, the project runs but gives errors.	
No, because reasons;	

1. Application

Are node_modules included in the repository?	NO
Is the package.json correct? Any unnecessary dependencies?	Yes
Does the repository and package.json have a license?	Yes
Are dependencies and devdependencies split?	Yes
Is there a .env file or .env_sample?	Ja, hij staat in de .gitignore dus als ik hem clone kan ik er niet bij. Door aan Jordy de url te vragen en te vervangen, runt de app succesvol.

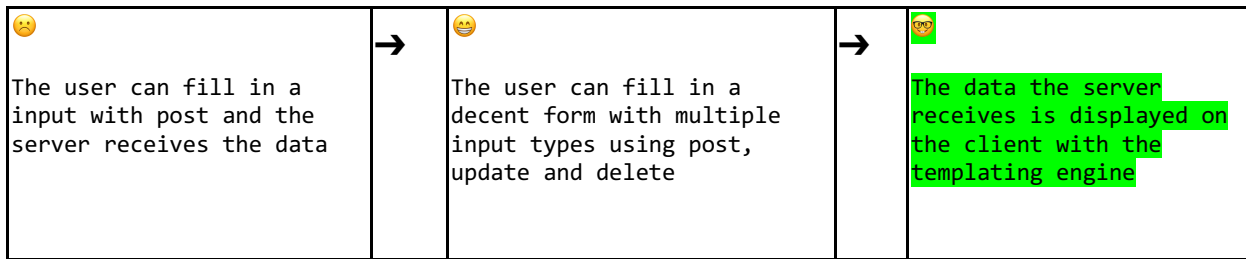

Node, NPM & Express

 <p>The project has a package.json and packages from NPM are installed; works without</p>	→	 <p>A node server runs with express, and serves up static files</p>	→	 <p>A complex node server runs with express, middleware is used</p>
--	---	--	---	--

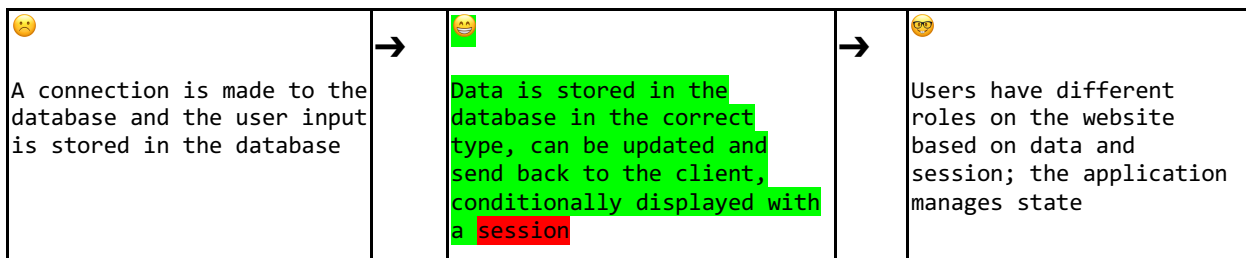

Templating & routing

 <p>You can navigate to routes and the server responds with a resource</p>	→	 <p>A templating engine is used to render, the projects has partials and includes</p>	→	 <p>Advanced express routing, middleware use is complex and query parameters are used</p>
---	---	--	---	--

User input

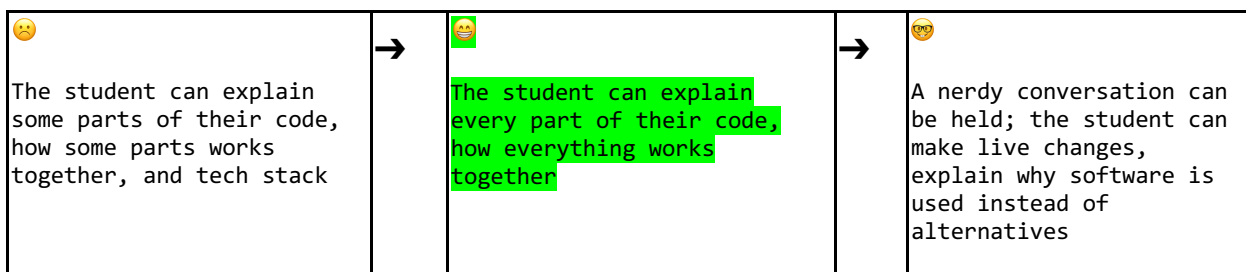

Database & session

Comments

Het werkt zoals het hoort te werken, alleen mist er een 'session'. Echter lijkt het alsof je een session gebruikt, dus daar zal nog verdere research/experimenten naar gedaan moeten worden.

2. Understanding

Comments

Kan goed onderbouwen wat hij geschreven heeft en welk doeleinde elk codeblock heeft.

3. Quality

Does the readme.md cover what the project does? (concept)	No
Does the readme.md include how to install the project? (install)	Yes
Is it clear how the database is structured?	No

Code quality

 There is a distinction between ES5 versus ES6, there are code comments throughout the code	→	 The code is readable and consistent, uses modern JavaScript syntax	→	 Code quality is good and enforced, the project is structured logically
---	---	---	---	---

Documentation

 The code, project, and process are partially documented	→	 The docs cover the process and what the project is and does	→	 Docs are more than useful and professional
--	---	--	---	---

Comments

Wiki bevat veel en goede content. Hier en daar nog wat aanvullingen, maar hij is bijna zo goed als compleet.
